

Polypearl

Cavity Wall Insulation

PLATINUM

Part L

is no longer a Puzzle

Polypearl are proud to announce the arrival of their new brand of Cavity Wall Insulation **Polypearl Platinum** a further leap forward in thermal performance with a lambda value of 0.033 w/m^2 it offers builders a solution to the puzzle of how to build highly insulated homes for the future.

We have pieced together the various problems facing builders today and whether it's the latest building regulations or the thermal insulation targets for sustainable homes that are puzzling to you Polypearl has the answer.

Better U-Values

Our new **Polypearl Platinum** insulation is able to achieve **Much Improved U Values** when installed into traditional brick and block construction for example in a fully filled 100mm wide cavity a U-Value of 0.23 w/m^2 and better can be achieved.

Together with our standard product "**Polypearl Plus**" we can now offer the most flexible and cost effective route to building traditional homes which are solid in construction, comfortable to live in and affordable to heat.
